This was my exchange with Carlton and Barry. The Word file was attached to my first email at the bottom of this email chain. I did not have another meeting Carlton and Barry, or additional emails.

**Subject:** cheat sheet for Oak Ridge risk based discharge limits  
**Importance:** High

Hello Carlton and Barry,

Per your request from our discussion on July 30, I am attaching a cheat sheet on the Oak Ridge risk assessment regarding discharge limits into Bear Creek. I have broken the cheat sheet into 2 parts:

1. **Issues with DOE Discharge Limits in 2021 FS Appendix K** – explains how DOE came up with proposed discharge limits in the Focused FS and why their approach is incorrect for complying with the Clean Water Act's Water Quality-Based Effluent Levels (WQBELs) as an ARAR at Bear Creek.
2. **Instructions for DOE** – provides an explanation on how DOE should develop WBELs and discharge limits for Bear Creek.
  - a. **Approach** - Describes the general procedure DOE should be taking.
  - b. **Methods** – Describes the input parameters DOE should be using when running the EPA PRG calculator when developing WBELs.

- c. **Results** – Provides a table of WQBEL and discharge limits I developed using the CWA methodology with the EPA PRG calculator. The table assumes that DOE does not conduct a fish consumption study to support revising the default fish consumption rate with site-specific information.

Please let me know if you have any comments or questions.
